## **Preparation for German Roach Treatment**

1. Remove all items from cabinets and drawers that have roach activity. (Usually the kitchen and/or baths)
  2. Remove all wall outlet plates in these same areas.
  3. Move all items away from the walls so the technician can treat the perimeter.
  4. Remove all items from below the sinks in the kitchen and bath.
  5. All pilot lights should be extinguished prior to service. (Stove, furnace, water heater, etc.) You may re-light them after the service.
  6. All people and pets must be out of the house for 3 to 4 hours.
  7. Plan to perform the above preparations in advance prior to the technician's arrival to allow yourself ample time.
  8. Set up a follow-up treatment in two weeks to re-treat all areas. Everything must be pulled out again as with the first treatment. **You will not have to remove the wall plates or extinguish the pilot lights for the follow-up treatment.**
  9. Your cooperation is key to the successful elimination of your pest problem. Thank you in advance for all your hard work.
